DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 5-13, 16-17 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1, 13, and their dependants thereof, are allowed because the closest prior art, Gallagher (US Pub No. 2006/0019656) discloses an unlicensed wireless service is adapted to generate the interface protocols of a licensed wireless service to provide transparent transition of communication sessions between an licensed wireless service and an unlicensed wireless service, Singer (US Patent No. 5,485,163) discloses a system for location a portable locator device in a communication network which forward the information along with identifying service node information to a network location processor, either alone or in combination, fails to disclose a mobile telecommunications network including: a plurality of base station systems arranged to communicate with a mobile terminal over a predetermined licensed radio interface and switching centers connected to a plurality of said base station systems wherein each switching center and the base station systems connected thereto share a location area identity, said base station systems being adapted to communicate information indicative of said location area identity to a mobile terminal, wherein said network further

includes at least two unlicensed-radio access networks, each comprising an access network controller connected to one of said switching centers, multiple access points adapted to communicate with said mobile terminal via an unlicensed-radio interface and a broadband network connecting said plurality of access points with said access network controllers and a lookup table mapping a location area identity with address information for an access network controller on said broadband network, and wherein each said access point is arranged to connect a mobile terminal with a default access network controller, said default access network controller being adapted to receive a request from said mobile terminal containing information indicative of a last location area received by said mobile terminal, to submit a request to said lookup table containing said location area information, to receive address information from said lookup table for an access network controller mapped to said location area in response to said request, and to transmit said address information to said mobile terminal via said access point, said address information enabling said mobile terminal to establish a connection with said addressed access network controller via said access point and said broadband network.

Claims 8, 16, 17, and their dependants thereof, are allowed because the closest prior art, Gallagher (US Pub No. 2006/0019656) discloses an

unlicensed wireless service is adapted to generate the interface protocols of a licensed wireless service to provide transparent transition of communication sessions between an licensed wireless service and an unlicensed wireless service, Singer (US Patent No. 5,485,163) discloses a system for location a portable locator device in a communication network which forward the information along with identifying service node information to a network location processor, either alone or in combination, fails to disclose an unlicensed-radio access system connected to a core network portion of a licensed mobile network, said unlicensed-radio access system including: a plurality of access points adapted to communicate with mobile stations over an unlicensed-radio interface, a plurality of access network controllers connected to said core network portion and a broadband network connected to both said access points and said access network controllers, wherein each said access network controller is associated with a location area in said licensed radio mobile network, said system furthermore being provided with at least one lookup table containing information mapping location areas to address information of access network controllers on said broadband network, wherein each access point is arranged to receive from a mobile station information indicative of a location area corresponding to a portion

of said licensed mobile network, to obtain from said lookup table address information of an access network controller on said broadband network associated with said location area information, and to establish a connection with said addressed access network controller via said broadband network.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
